Enrollment Manager

Event Manager can:
List a learner's historical enrollments
View details (per-lesson progress) of enrollment
Modify the lesson path of the enrollment
Enroll (create a new enrollment for the learner)
Unenroll the learner

Event Manager should have a sticky position to the top half of the viewport and must occupy at least half of the viewport.

{learner_id}

Learner profile is rendered at the top right of the enrollment manager. There should be an interface (like dropdown) to allow swapping between learners

Web Page is essentially a single-page app (SPA) implemented with either javascript or web assembly.

The SPA is hosted at /.

Scenario Player

Scenario Player should have a look and feel of a playback control bar of a media player with the following elements:
Play/Pause
Stop
Next
Progress Bar
Playlist (where each "track" is the event object dictated in events.json that is sent to the service for ingestion and each scenario has its own "playlist")
Playback speed, an integer counter from 1 - 5 that dictates how many seconds the playlist must wait before send the next event to the service

Scenario Player should have a sticky position to the bottom half of the viewport and must occupy the least amount of screen as possible.
